

## Bandit – Stage by Stage explanation

### Level 0

All you have to do here is ssh onto the bandit server. This can be done with the command `$ ssh -p 2220 bandit0@bandit.labs.overthewire.org` and then entering the password `bandit0`

### Level 1

The password for the next level is stored in a file on the desktop named 'readme'.

This can be revealed with the `ls` command, and read with `cat readme`.

The password for bandit1 is `boJ9jbbUNNfktD7800psq0ltutMc3MY1`

### Level 2

The password here is stored in a file called '-'

This can be revealed with the `ls` command, but running `cat -` confuses the system, as `-` normally denotes a flag. We can get around this by using the complete file path, './-'. This gives us the command `cat ./-`

The password for bandit2 is `CV1DtqXWVFXTvM2F0k09SHz0YwRINYA9`
